Enhancing or Non detrimental Ions	0 to 5
Water	65 to 72

- B. This product shall meet applicable regional, state and federal requirements for products applied to road surfaces.

- D. Three weeks prior to the first application the Contractor shall supply a sample of the product to Teton County for testing.

2.2 Equipment

- A. Contractor shall provide equipment for uniformly applying material. The distributor and equipment shall be capable of uniformly distributing material at uniform pressure on variable widths of surface at readily determined and controlled rates from 0.20 to 0.6 gallons per square yard. The allowable variation from any specified rate shall not exceed plus or minus 0.02 gallon per square yard. Distributor equipment shall include a tachometer, pressure gages, and accurate volume measuring devices or a calibrated tank. Distributors shall be equipped with adjustable spray bars.

PART 3 WORKMANSHIP

3.1 Delivery

- A. County will communicate with Vendor's designated representative at least 5 days prior to the next application date with quantities needed, time of delivery, location and any other pertinent information. The Application Schedule represents the typical order of applications per day that

the material is applied and will be followed as closely as possible. Inclement weather will dictate when applications are postponed or changed.

- B. Application Schedule: An application schedule will be determined and agreed upon by the County and the contractor after the Bid is awarded and will be included in the contract documents. The Application Schedule represents the typical order of applications per day that the material is applied and will be followed as closely as possible. Inclement weather will dictate when applications are postponed or changed.

3.2 Application

- A. The County will be responsible for preparing and processing the roadbed before and after the application of Magnesium Chloride.
- B. The contractor shall place the specified amount of Magnesium Chloride solution on the road surface in an accurate manner with a pressurized spreader bar. Applications will vary from .3 gallon/sq. yard to .50 gallon/sq. yard. All applications requiring a final coverage of 0.4 gallons/sq. yard or greater shall be applied in two equal applications. The application procedure will be determined on a case by case basis by a representative of the County.
- C. The County reserved the right to test and verify the application rate at any time before, during, or after the application of Magnesium Chloride. If the applied rate does not meet the required application rate with the tolerances specified in 2.2 A the contractor shall immediately stop work and until the correct application rate is achieved. The contractor is responsible for achieving the correct application rate.

PART 4 MEASUREMENT AND PAYMENT

- 4.1 The material will be measured and paid in gallons and square yards applied. The County estimates 105,600 gallons of Magnesium Chloride will be applied to approximately 26 miles of roadway. The application rate for approximately 3.25 miles of roadway will be 0.4 gallon/sq. yard and 22.75 miles will be at 0.3 gallons/sq. yard. The estimated quantities are not guaranteed, and are solely for the purpose of comparison of Bids, and final payment for all unit price Bid items will be based on actual quantities, determined as provided in the Contract Documents
- 4.2 Penalties: The contractor shall be penalized by the following amount should the tests fail as stated above. The contractors payment for applying dust control, that does not meet the minimum dust palliative will be reduced by 130% of the prorated amount of dust palliative actually applied. Example: The contractor applies a solution that was specified to be a minimum of 30% dust palliative and tests return that only 25% dust palliative was actually applied. A 5% lower solution is 17% lower concentration than the original 30% that was bid. 130% of 17% equates to a 22% reduction in payment.

END OF SECTION
